Activity 5: Implementation of the Philippine Rice Genome Database Portal Consisting of SNP-Seek Database and Associated Tools

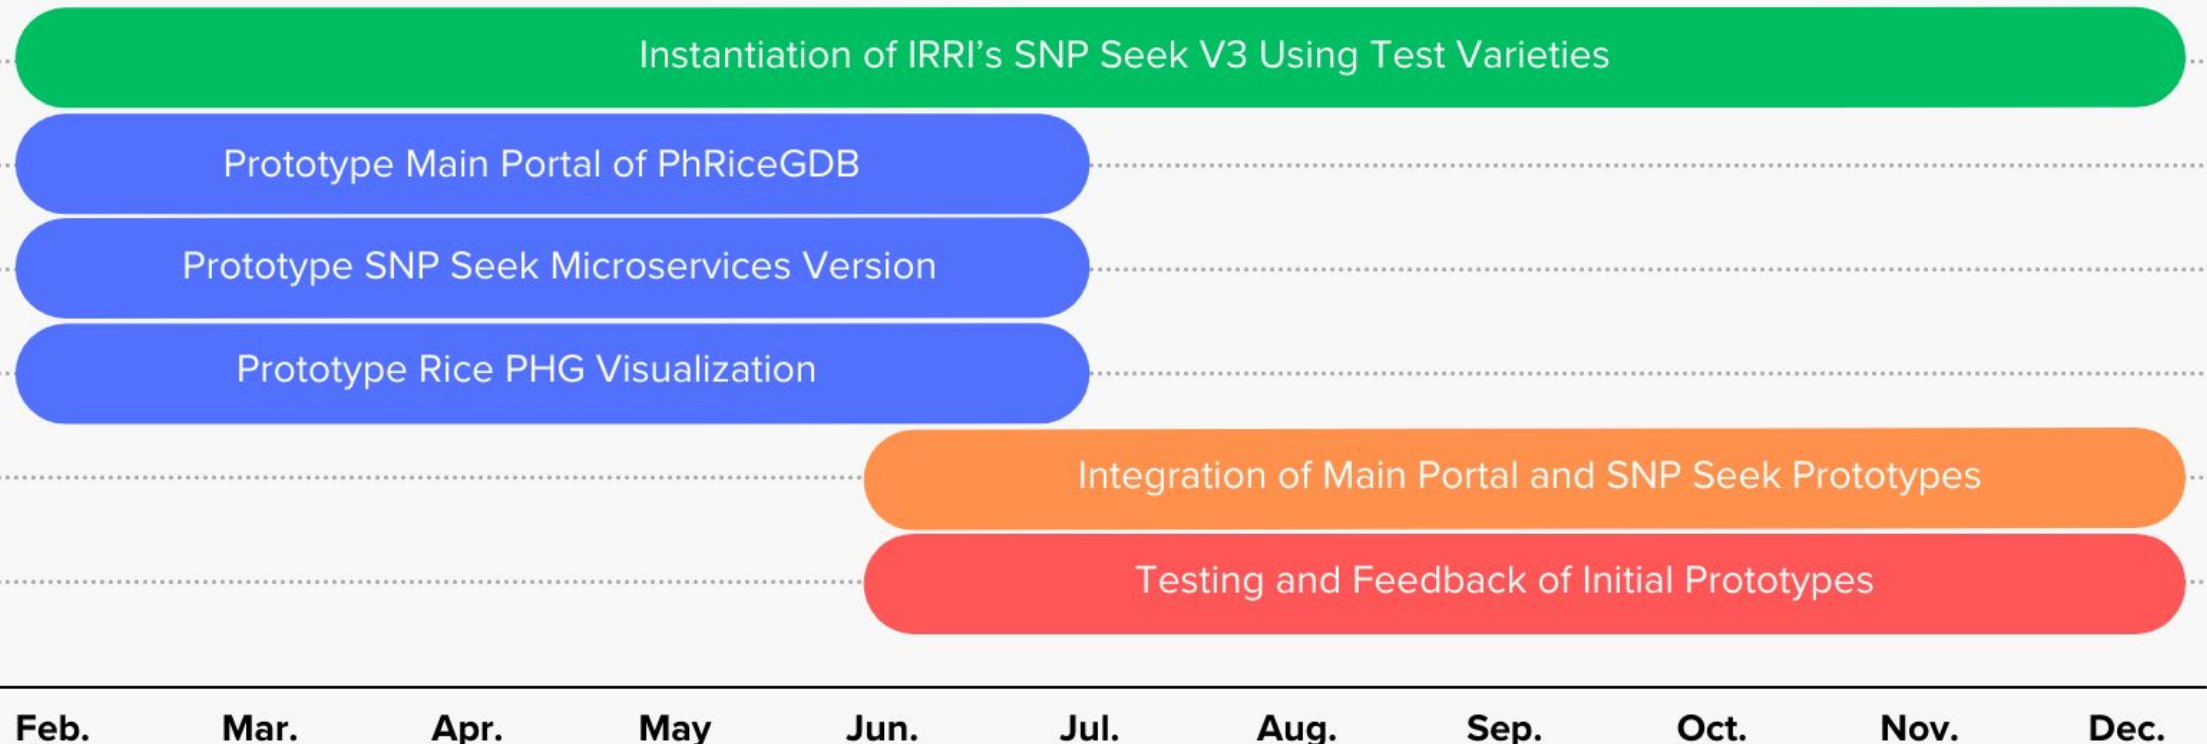

*Lead: Arian J. Jacildo, Institute of Computer Science (ICS), College of Arts and Sciences (CAS),
University of the Philippines Los Baños*

Objective: To establish the Philippine Rice Genome Database (Ph Rice GDB) and provide trainings on usage, data curation, and associated analytical tools.

Activity 5: Implementation of the Philippine Rice Genome Database Portal Consisting of SNP-Seek Database and Associated Tools

Lead: Arian J. Jacildo, Institute of Computer Science (ICS), College of Arts and Sciences (CAS), University of the Philippines Los Baños

Rice SNP-Seek Database

[Home](#) [Search](#) [Browse](#) [My Lists](#) [Order Seeds](#) [Download](#) [Help](#)

By using SNP-Seek, you abide by the data use license stated [here](#) , and development [here](#)

This site provides Genotype, Phenotype, and Variety Information for rice (*Oryza sativa* L.). SNP genotyping data (called against [Nipponbare reference Os-Nipponbare-Reference-IRGSP-1.0](#)) came from [3,000 Rice Genomes Project](#) . Phenotype and passport data for the 3,000 rice varieties came from the International Rice Genebank Collection Information System (IRGCIS). We are a part of an ongoing effort by the International Rice Informatics Consortium (IRIC) to centralize information access to rice research data and provide computational tools to facilitate rice improvement via discovery of new gene-trait associations and accelerated breeding.

About IRRI

The International Rice Research Institute (IRRI) is dedicated to improving rice production and food security worldwide.

What is SNP-MERN?

IRRI's SNP-seek reinvented with the MERN stack for a more efficient and user-friendly experience.

Why Use SNP-MERN?

SNP-MERN provides a more efficient and user-friendly experience for advanced genomic research.
